A new REM C16II model of Switch Tamping Machine has successfully passed all factory tests and quality attestation. This is a new tamper model, a high productivity REM Switch Tamping Machine especially developed to cover the high requirements of our customers concerning speed, precision, need of productivity and long term of exploitation without a capital repair. The Tamper REM C16II
distinguishes with fully original construction /a
3D project of REM engineer team by R&D Center “REM"
/, a new model of tamping units, a laser system for levelling, standard option: air – conditioning, the machine has been equipped with western hydraulics system, electronics and a German engine model Deutz BF12L513C 12V.

The long 18 – month duration guarantee term, as well as the German engine and hydraulics gives a unique opportunity to our clients to choose REM C16II Universal Tamper to analogical machines of the same type of competitive manufacturers like: Unimat 08-275/4S - Plasser&Theurer AT or B 66 UC Matisa CH.
Our clients obtain the exclusively attractive purchase price without competition on the market, plus two additional bonuses: opportunity for purchase with leasing, or an opportunity for purchase of a new REM C16II tamper/ for an old tamper (with deduction of some percentage from the price upon return of an amortized tamper) upon completely 100 % guaranteed service performed by available subdivisions of REMTECH .
